|----------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| <b>Catalog Description</b>             | Fundamentals of electric circuits, variables, and lumped circuit elements. Kirchhoff's laws. Resistive circuits. Methods of circuit analysis. Operational amplifiers (op amps). Energy storage elements. Analysis of first and second-order circuits. Experiments on resistive circuits, first and second-order circuits, and op amp circuits.        |  |  |
| <b>Course Objectives</b>               | This course equips students with the fundamentals of electric circuits, including energy storage, transient and steady-state responses, and operational amplifiers. The course covers the fundamental laws and techniques, such as nodal and mesh analysis and Thevenin and Norton equivalent circuits.                                               |  |  |
| <b>Required Reading</b>                | Textbook: Nilsson, J.W. & Riedel, S. A. (2020). Electric Circuits. 11 th Ed., Pearson.<br><i>Note: 9th and 10th editions of this book are also acceptable.</i>                                                                                                                                                                                        |  |  |
| <b>Suggested / Recommended Reading</b> | 1. Johnson, D. E., Johnson, J. R., Hilburn, J. L. & Scott, P. D. (1997). Electric Circuit Analysis. 3rd Ed., John Wiley & Sons.<br>2. Alexander, C. K., & Sadiku, M. (2009). Fundamentals of Electric Circuits. 4th Ed., McGraw Hill.<br>3. Hayt, K., Kemmerly, J. & Durbin, S. (2018). Engineering Circuit Analysis. 9th Ed., McGraw-Hill Education. |  |  |
| <b>Software Usage</b>                  | MATLAB and LTspice ( <a href="https://www.analog.com/en/resources/design-tools-and-calculators/ltspice-simulator.html">https://www.analog.com/en/resources/design-tools-and-calculators/ltspice-simulator.html</a> )                                                                                                                                  |  |  |
| <b>Course Learning Outcomes (LOs)</b>  | Upon successful completion of the course, students will be able to:<br>1. Recognize the basic circuit concepts, including voltage, current, energy, and power,<br>2. Express the node and mesh analysis methods used in linear time-invariant circuits analysis,                                                                                      |  |  |

|                                                                                   |                                                             |                |             |
|-----------------------------------------------------------------------------------|-------------------------------------------------------------|----------------|-------------|

|                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|---------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                       | 3. Apply Thevenin and Norton theorems for investigating circuits, including operational amplifiers,<br>4. Analyze alternating current (AC) circuits using sinusoidal steady-state analysis techniques,<br>5. Evaluate the behavior of capacitors and inductors in circuits, assessing both transient and steady-state responses of first-order circuits,<br>6. Experiment on resistive circuits, first and second-order circuits, and op amp circuits in collaboration with peers. |
| <b>Course Evaluation</b>              | Course feedback survey will be conducted in the last two weeks of the semester.                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Course Web Page</b>                | The class has already been enrolled in Moodle ( <a href="https://lms.tedu.edu.tr/">https://lms.tedu.edu.tr/</a> ). All announcements and course-related materials will be posted on the Moodle course page.                                                                                                                                                                                                                                                                        |

Make-up Policy</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| There will be <u>one make-up exam</u> for the exams which will be available if and only if you have a legitimate reason for missing the exam (such as illness, death in the family, a traffic accident, <i>etc.</i> ). In case of an illness or emergency, you must supply a formal documentation that supports your claim. <u>The topics for the make-up exam are from everything that is covered in class at the time of the exam. There will be no make-up for the quizzes or homeworks.</u>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>III. Late Submission Policy</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## SYLLABUS FOR EE 201-CIRCUIT THEORY I

TED UNIVERSITY

DEPARTMENT OF ELECTRICAL AND ELECTRONICS ENGINEERING

Academic Year & Semester

2025-26 Spring

Page 5 of 5

Late submissions will not be graded. Missed quizzes without any clarification will result in a grade of zero.

### IV. Cheating & Plagiarism

Collaboration is strongly encouraged; however, the work you hand in must be solely your own. Cheating and plagiarism are severe offenses and will be penalized accordingly by the university disciplinary committee. Cheating has a comprehensive description which can be summarized as "acting dishonestly." Some of the things that can be considered cheating are the following:

- Copying answers on exams, home works and lab works,
- Using prohibited material on exams,
- Lying to gain any advantage in class,
- Providing false, modified, or forged data in a report,
- Plagiarizing (see below),
- Modifying graded material to be re-graded,
- Causing harm to colleagues by distributing false information about an exam, homework, or lab.

All of the following are considered plagiarism ([www.plagiarism.org](http://www.plagiarism.org)):

- Turning in someone else's work as your own,
- Copying words or ideas from someone else without giving credit,
- Failing to put a quotation in quotation marks,
- Giving incorrect information about the source of a quotation,
- Changing words but copying the sentence structure of a source without giving credit,
- Copying so many words or ideas from a source that it makes up the majority of your work, whether you give credit or not.

### V. Disability Support

If you have a disabling condition that may interfere with your ability to complete this course successfully, please contact Dr. A. Nezh Güven ([nezih.guven@tedu.edu.tr](mailto:nezih.guven@tedu.edu.tr)).

### VI. Student Development and Psychological Counseling Center

Student Development and Psychological Counseling Center conducts individual psychological counseling, group psychological counseling, preventive and developmental services such as workshops and seminars for all students in need. You may apply to our Center in order to deal with all your current problems.
